

Does RMSE aggregation change the comparison?

Full TNP minus M10 | negative values favor TNP | shared seeds 1-5

Colored points and lines: paired seed means over five folds. Black diamonds and bars: mean +/- SD across five seeds.
Within each fold: hybrid-pooled = $\sqrt{\text{sum}(N * \text{RMSE}^2) / \text{sum}(N)}$; equal-environment = mean of 19 environment RMSEs.
